ACOLEAD AI CONNECTOR Early Access

Bring AcoLead to Your AI Assistant

Connect your AcoLead account to Claude, ChatGPT and the AI tools your team already uses. Ask about leads, site visits, bookings, team performance and marketing spend in plain language, and get answers from your live CRM.

Connect Your Assistant | See What You Can Ask

Works with your existing AcoLead login. No API keys.

Connect With

Pick your assistant. Claude and ChatGPT connect in a few clicks; developer tools take one command.

- **Claude** — Connect in minutes
- **ChatGPT** — Connect in minutes
- **Claude Code** — View command
- **Cursor** — View setup steps

Add AcoLead to Claude or ChatGPT

1. Open your assistant's settings and choose to add a custom connector.
2. Name it AcoLead and paste the server URL below.
3. Sign in with your AcoLead account and approve access.
4. Start a new chat and ask your first question.

On team or enterprise plans, your workspace admin may need to allow custom connectors first.

Server URL
```
[ACOLEAD MCP SERVER URL]
```
Copy

Add AcoLead to Claude Code

1. Run the command in your terminal.
2. Start a Claude Code session and type /mcp to sign in to AcoLead.

Terminal Copy
```
claude mcp add --transport http acolead [ACOLEAD MCP SERVER URL]
```

Add AcoLead to Cursor

1. Open Cursor settings and go to MCP.

mcp.json Copy
```
{
```

2. Add a new server and paste this configuration.
3. Click to authenticate and sign in to AcoLead.

```
{
  "mcpServers": {
    "acolead": {
      "url": "[ACOLEAD MCP SERVER URL]"
    }
  }
}
```

What You Can Ask

The connector gives your assistant read-only access to your AcoLead data, limited to what your role can see. Ask the way you would ask your sales manager.

Pipeline & Funnel

Leads by stage, and how many became valid, contacted, visited and booked.

"How many of this month's leads reached a site visit and a booking?"

Leads at Risk

Intent bands and Ignored, Cooling and At Risk flags, by salesperson.

"Show Hot or Ready-to-Close leads that are At Risk."

My Day

Today's follow-ups and the overdue backlog, in priority order.

"What should I do first today?"

Site Visits & Bookings

Planned, overdue, completed and cancelled visits and bookings.

"Which site visits are planned for tomorrow, and which are overdue?"

Team Performance

Calls, follow-ups, visits and bookings per team member.

"Who has the most overdue follow-ups this week?"

Marketing ROI

Spend, cost per lead, completed visit and booking, by source.

"Which source gives the lowest cost per booking?"

Meta Ads

Campaign structure and performance from your connected ad accounts.

"Which Meta campaign brought the most site visits last month?"

Attendance & Availability

Who is checked in, on leave or available for new leads.

"Who can take new leads right now?"

How It Works

1

Connect

Add AcoLead to your assistant with the server URL or one command.

2

Authorize

Sign in with your AcoLead account. The assistant sees only what your role can see.

3

Ask

Ask in plain language and get answers from your live CRM data.

No API keys to manage. Connect once, disconnect anytime.

Your Data Stays Under Your Control

Your Own Sign-In
Each person connects with their own AcoLead account.

Limited to Your Role
Owners see the company, managers their team, staff their own leads.

Read-Only
The assistant reads your data. It cannot change leads or settings.

Staff Location Stays Private
AcoLead never shares staff location with AI assistants.

FAQs

- ▸ What is MCP?
- ▸ Is the connection secure?
- ▸ Which AI assistants work with AcoLead?
- ▸ Can the assistant change my CRM data?
- ▸ Do I need an AcoLead account?
